The trades shown were generated by the system during backtesting, assuming that for every stock symbol, you only took one trade per month. In other words, if there was a repeat trade generated by the system, we assume that if you were already in one option position for that stock, you did not double your position in that stock's options and take second position. Also, we assume that only those trades that could have actually been executed are shown. If a trade could not have been executed, it is not shown. The advisors did make some of these trades during the testing period, but they did not enter every trade shown. However, to give you an indication as to how the service would have performed had you taken all the trades, the complete track record is provided. As a result, some trades shown in this track record are hypothetical. HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN INHERENT LIMITATIONS. For a complete description of those limitations, please see the IMPORTANT RISK DISCLOSURE INFORMATION section at the bottom of this web page: <http://www.oddssigint.com>

Important note: In this track record, we show only one position per stock per expiration month. For instance, if we recommended a November Conoco Phillips spread on October 4, and then again on October 15, we only show the October 4 results, even if the later trade was a winner. That's because most customers take only take the first trade. The reason we provide repeat recommendations is due to the fact that we continually have new customers joining the service, and we want to provide them with an opportunity to take a trade that our system has ranked "best of the best", even though other customers may already be in similar position. In the service itself, all repeat trades are clearly marked. We made this format change in May 2006.
